TIMBER PROCESSING™

CHECK OUT www.timberprocessing.com

AT LARGE

50 ► —recognize and eliminate costly mistakes that rob a company of its maximum profitability;

—fine-tune or improve an existing quality and process control program to increase its effectiveness;

—reduce moisture content variability and drying defects in the lumber drying process;

—maintain an effective lumber size control program;

—learn about real-time lumber size control in use in mills today;

—learn how changes in kerf, target size, price, wane allowance, etc., interact to influence profitability;

—get ideas from other attendees and

industry speakers on how they have achieved positive results from quality and process control.

This workshop is designed for first line supervisors, graders, and Q.C. personnel.

The Annual Lumber Quality Leadership Workshop focuses on leadership in quality control and management. Attendees will have the opportunity to go beyond the basics and focus on concepts and ideas that will propel your QC programs to the next level.

There are several key activities that must be accomplished for a lumber QC program to be successful: managing the quality function, statistical process control, involving employees in problem

solving, using effective leadership skills, and finding long-term solutions to problems.

Attendees will have an opportunity to work with these topics and others in a small group environment. This program is designed for managers, superintendents, QC personnel, and first-line supervisors.

Both workshops will provide excellent ideas for gaining hundreds of thousands of dollars in profits for sawmills of any size.

Contact the Lumber Quality Institute, 1309 35th Ave. NW, Salem, OR 97304; 541-752-2751; email: assistance@lumberquality.com; visit lumberquality.com.
